

Toy Store Analytics Dashboard Report

The dataset contains sales-related information of a toy store business. It includes details about products, revenue, profit, store locations, and units sold. The dataset was used to create an interactive Power BI dashboard for analyzing business performance and identifying sales trends.

Dataset Columns:

- Date
- Store Name
- Region
- Store Type
- Product Name
- Product Category
- Units Sold
- Revenue
- Profit

Questions Performed in Dashboard

1. Show Total Revenue using Cards
2. Add Slicer for Region and Year
3. Show Highest Selling Products
4. Show Weekdays Average Profit
5. Compare Units Sold vs Revenue Generated
6. Show Current Year Revenue by Year and Month

Data Cleaning

Data Cleaning Steps:

- Removed unnecessary top rows
- Used first row as headers
- Removed blank and unwanted columns
- Fixed incorrect data types
- Converted Date column into Date format
- Converted Revenue and Profit into numeric format

Data Analysis

1. Total Revenue Analysis using KPI Card
2. Region-wise filtering using slicers
3. Highest Selling Products using Top 10 Bar Chart
4. Average Profit by Weekday analysis
5. Units Sold vs Revenue comparison using Combo Chart
6. Latest Year Revenue Trend using Line Chart

Measures Created:

1. Total Revenue = SUM('Data'[Revenue])
2. Total Profit = SUM('Data'[Profit])
3. Total Units Sold = SUM('Data'[Units Sold])
4. Average Profit = AVERAGE('Data'[Profit])

Columns Created:

1. Year = YEAR('Date Table'[Date])
2. Month Name = FORMAT('Date Table'[Date], "MMMM")
3. Month Number = MONTH('Date Table'[Date])
4. Weekday = FORMAT('Data'[Date], "dddd")
